

# Compact Guide Cylinder

## Series MGQ

ø12, ø16, ø20, ø25, ø32, ø40, ø50, ø63, ø80, ø100

Air cylinder with guide integrated that has achieved anti-lateral load and high non-rotating accuracy.

Space-saving cylinder.  
Suitable as stoppers or lifters in conveyor line.

**Cylinder position can be detected.**

All models have built-in magnets for auto switches.

**Two types of guide rod bearing for different applications**

**Slide bearing**

Slide bearing Strength against side load is more than 2 times as compared conventional stopper cylinder (Compared to SMC Series RSQ, round bar type).

**Ball bushing bearing**

Smooth operation is suitable for pushing, lifter and applications where high precision is required.

**Non-rotating accuracy**

Bore size (mm)	Non-rotating accuracy $\theta$

80	$\pm 0.04^\circ$	$\pm 0.05^\circ$
100	$\pm 0.04^\circ$	$\pm 0.05^\circ$

**Can be mounted from two directions**

**Auto switches, lead wires and terminals can be fixed in the groove of cylinder body.**

## Copper and Fluorine-free Series (For CRT manufacturing process)

To prevent the influence of copper ions or halogen ions during CRT manufacturing processes, copper and fluorine materials are not used in the component parts.

### How to Order

# Series MGQ Specific Product Precautions

Be sure to read before handling. Refer to front matters 42 and 43 for Safety Instructions and pages 3 to 11 for Actuator and Auto Switch Precautions.

## Mounting

### ⚠ Warning

1. Avoid placing your hands or fingers between the plate and the body.

- Be very careful to prevent your hands or fingers from getting caught in the gap between the cylinder body and the plate when air is applied.

### ⚠ Caution

1. Do not scratch or gouge the sliding portion of the piston rod and the guide rod.

- Damaged seals, etc. will result in leakage or malfunction.

2. Do not dent or scratch the mounting surface of a body and a plate.

- The flatness of the mounting surface may not be maintained, which would cause the sliding resistance to increase.

3. Make sure that the cylinder mounting surface has a flatness of 0.05 mm or less.

- If the flatness of the workpieces and brackets mounted on the plate is not appropriate, sliding resistance may increase.

4. When mounting on the bottom of the cylinder, the guide rod protrudes from the bottom at the retraction stroke end. Therefore, drill holes for the hexagon socket bolts used for mounting purposes, and relief holes for the guide rods.

Moreover, in applications where impact occurs from a stopper, etc., the mounting bolts should be inserted to a depth of 2d or more.

Operating Range when Used as Stopper

Bore Size  $\phi 12$  to  $\phi 25$ /MGQM12 to 25 (Slide Bearing)

\* When selecting a model with a longer  $l$  dimension, be sure to choose a bore size which is sufficiently large.

**Caution on handling**

Note 1) When using as a stopper, select a model with 30 stroke or less.

Note 2) Model MGQL (Ball bushing bearing) cannot be used as a stopper.

Use grooves section "a" and section "b" in the figure below of the cylinder body for firmly fixing in the following case. (Applicable bolt size is M3.)

• These grooves can be used for firmly fixing the tying bands of lead wires of the auto switch, etc., and also terminal boards, etc., to the main body of the cylinder.

• When the terminal block is fixed on a cylinder directly.
