Double Layer Tubing Stripper

Series TKS

Allows easy stripping of the outer layer from double layer tubing.

Able to strip without damaging the inner tubing

The outer tubing can be stripped without damaging the inner tubing because a pawl is inserted between the inner and outer tubing layers.

Caution

Do not use to strip covering materials from electrical wires, etc.

Adjustment of cutter and stripping length is unnecessary

A constant stripping length is always possible due to the fixed cutter with angle that cuts until the tubing reaches the end surface inside the stripper.

Removal of stripped tubing is unnecessary

Since the stripped tubing is discharged to the outside, no additional labor is required to remove it.

Can be attached to tools

Stripping work can be automated by attaching to an air driver, etc.

- Even double layer polyurethane tubing (series TRBU) which is highly adhesive to the external layer can be stripped easily.
