⚠ Precaution

Design

⚠ Warning

- ① **In cases where the work pieces are heavy or dangerous, etc., take measures to address a possible loss of adsorption force (installation of drop prevention guides, etc.).**

In the case of transportation by vacuum adsorption using vacuum pads, adsorption force is lost when there is a drop in vacuum pressure. Furthermore, since vacuum pressure can also deteriorate due to wear and cracking of pads, and vacuum leakage from piping, etc., be certain to perform maintenance on vacuum equipment.

Selection

⚠ Caution

- ① **The pad materials differ depending upon the operating environment.**

An appropriate pad material should be selected. Furthermore, since vacuum pads are manufactured for use with industrial products, they should not have direct contact with pharmaceuticals or food products, etc.

- ② **Depending upon the weight and shape of the work pieces, the diameter, quantity and shape of pads will vary.**

Use the pad lifting force table for reference. Also, the pads selected will differ based upon conditions other than the above, such as the condition of the work piece surface (presence or absence of oil or water), the work piece material and its gas permeability. Confirmation is necessary by actually performing vacuum adsorption testing on the subject work pieces.

- ③ **Use a buffer for adsorption on fragile work pieces.**

The cushioning by the buffer is necessary when there is variation in the height of work pieces. When further positioning of pads and work pieces is desired, a detent buffer can be used.

- ④ **The life of the buffer will be reduced if lateral force is applied to the buffer shaft.**

Note that sometimes a load is applied to the buffer by a piping tube (pulling or pressing, etc. in a lateral direction).

- ⑤ **Do not apply an impact or large forces to a pad when adsorbing a work piece.**

This will cause deformation, cracking and wear of the pad to be accelerated. The stiffening ribs, etc. should touch lightly, while staying within the pad skirt's deformation range. Positioning should be performed accurately. Especially in the case of small diameter pads.

- ⑥ **When transporting in an upward direction, factors such as acceleration, wind pressure and impact force must be considered in addition to the work piece weight.**

Use caution particularly when lifting items such as glass plates and circuit boards, because a large force will be applied by wind pressure. When a work piece which is oriented vertically is transported horizontally, large forces are applied by acceleration when movement is started and stopped. Further, in cases where the pad and work piece can slip easily, accelerations and decelerations of horizontal movement should be kept low.

- ⑦ **When transporting flat work pieces that have large surface areas using multiple pads, care must be taken when arranging the pads to balance the work piece.**

Maintenance

⚠ Caution

- ① **Perform pad maintenance regularly.**

Since pads are essentially rubber, deterioration is unavoidable. The rate of deterioration depends upon factors such as conditions of use, environment and temperature. Regular maintenance should be performed. If any damage, splitting, cracking or abrasion has occurred in a pad which appears to be harmful, replace it immediately. Also, take care not to damage the outside of the pad.

Bellows style

Technical drawing of a bellows style fitting. The drawing shows a cross-section of the fitting with various dimensions and labels. The dimensions are: E (total height), 45.5, 29.4, 20.5, 13, and Y. The labels are: Width across flats 8, Width across flats 10, Width across flats 7, Q (total length), R (flange radius), Applicable O.D. øP, øC, øK, øA, øB, øL, and øS (thread).

Bellows style

Technical drawing of a bellows style fitting. The drawing shows a side view of the fitting with various dimensions labeled. The dimensions are: G (width across flats for M6:8, M8:12), H (total height), F (height from base to top of bellows), E (height from base to center of bellows), D (height from base to bottom of bellows), C (height from base to top of bellows), Y (height from base to bottom of bellows), Q (height from base to top of bellows), R (height from base to center of bellows), S (height from base to top of bellows), P (height from base to top of bellows). The diameters are: ø3.5 (base diameter), øK (bellows diameter), øA (bellows diameter), øB (bellows diameter), øL (bellows diameter). The text 'Applicable tube O.D. øP' is also present.

Component Parts

No.	Description	Material	Note
①	Pad	Conductive NBR, Conductive silicon rubber, NBR, Silicon rubber, Urethane rubber, Fluorine rubber	
②	Lock ring	Brass	Electroless nickel plated
③	Adaptor	Brass	Electroless nickel plated
④	Buffer	Brass	Electroless nickel plated
⑤	Adaptor	Brass, PBT	Electroless nickel plated
⑥	Adaptor	Brass	Electroless nickel plated

Maintenance of Pad

Since pads are essentially rubber, deterioration is unavoidable. The rate of deterioration depends upon factors such as conditions of use, environment and temperature. Regular maintenance should be performed. If any damage, splitting, cracking or abrasion has occurred in a pad which appears to be harmful, replace it immediately. Also, take care not to damage the outside surface of the pad.

Replacement of Pad

- ① Pull the lock ring upward, and after lifting it to the adaptor, remove the old pad by pulling it downward.
- ② While holding the lock ring in the raised position, place a new pad onto the adaptor.
- ③ Confirm that the pad is securely in place, and then return the lock ring to its original position.

Made to Order Specifications

① Oval Pad/without Buffer

Non-standard oval pads without buffer for the ZPT, ZPR, and ZPY series.

Specifications

Applicable model		ZPT/ZPR/ZPY (without buffer)		
Series	Direction	ZPT	ZPR	ZPY
	Vacuum entry	Vertical	Lateral	Lateral
Mounting connection	Connection	Female thread	One-touch fitting	Barb fitting
		Two $\phi 3.5$ mounting holes are provided. Mount the pad with bolts at the desired position.		
Pad material		NBR, Silicon rubber, Urethane rubber, Fluorine rubber, Conductive NBR, Conductive silicon rubber		

Applicable pad diameter

Symbol	Short dia. X Long dia. (mm)
3507	3.5 X 7
4010	4 X 10
4020	4 X 20
4030	4 X 30
5010	5 X 10
5020	5 X 20

Symbol	Short dia. X Long dia. (mm)
5030	5 X 30
6010	6 X 10
6020	6 X 20
6030	6 X 30
8020	8 X 20
8030	8 X 30

Dimensions

Series ZP (Consult SMC for detailed specifications, dimensions and delivery.)

Made to Order Specifications

2 Oval Pad/with Buffer

Non-standard oval pads with buffer for the ZPT, ZPR, and ZPY series.

Suitable for picking oblong loads in a space saving application.

Specifications

Applicable model		ZPT/ZPR/ZPY (without buffer)		
Series	Direction	ZPT	ZPR	ZPY
	Connection	Vertical Female thread Barb fitting One-touch fitting	Lateral One-touch fitting	Lateral Barb fitting
Mounting connection		Male thread	Male thread	Male/Female thread
Buffer style		Non-rotating (K)		
Pad material		NBR, Silicon rubber, Urethane rubber, Fluorine rubber, Conductive NBR, Conductive silicon rubber		

*Consult SMC for applicable strokes.

50	○	○	○	○	○	○	
75	○	○	○	○	○	○	
100	—	—	—	—	○	○	

Pad material and Characteristics

◎: Little or no influence ○: Can be used depending on conditions X: Not suitable

Material	Item	Durometer HS (±5°)	Temperature range (°C)	Oil resistance (Gasoline)	Oil resistance (Benzol)	Alkali resistance	Acid resistance	Weatherability	Ozone resistance	Abrasion resistance	Water resistance	Solvents (benzene, toluene)
NBR		50°	0 to 120	◎	X	○	○	X	X	◎	○	X
Silicon rubber		50°	-30 to 200	X	X	○	X	◎	◎	X	○	X
Urethane rubber		60°	0 to 60	◎	X	X	X	○	◎	◎	X	X
Fluorine rubber		60°	0 to 250	◎	◎	X	◎	◎	◎	○	◎	◎
EPR		50°	-20 to 150	X	X	◎	○	◎	◎	○	◎	X

The above table covers only general characteristics of subject rubber materials.

Pad materials used by SMC pass nominal JIS material standards; however, actual performance depends on operating conditions.

Selecting The Vacuum Pad

A vacuum pad diameter (ϕD) can be determined by calculation if the lifting force needed to perform the work function is known. The weight of the workpiece and any potential dynamic forces involved during movement (lifting, stopping, rotating, etc.) need to be considered. The area of one pad can be divided to an equivalent area of multiple pads (n) as necessary, based on these forces and the shape of the load.

Calculation Method: Pad Diameter

A vacuum pad diameter with applied safety factor based on lifting orientation of workpiece (vertical or horizontal) can be derived from calculations or by using the Selection Graph shown below.

Calculations

$$\phi D = \sqrt{\frac{4}{3.14} \times \frac{1}{P} \times \frac{W}{n} \times t \times 1000}$$

ϕD : Pad diameter (mm)
 n : Number of pads used
 W : Lifting force (N)
 P : Stable vacuum pressure (kPa)
 t : Factor of safety:
 Horizontal pad contact: ≥ 4 (dynamic)
 Vertical pad contact: ≥ 8 (dynamic)

Graphical Method

The pad diameter required for horizontal (selection graphs ① and ②) or vertical contact can be found by setting the weight of the work the number of pads to contact the workpiece and the stable adsorption vacuum pressure.

Selection Graph① Selection graph of pad diameter by lift force horizontal (Reference value)

Selection Graph② Selection graph of pad diameter by lift force vertical (Reference value)

How to Read the Graph

Example: Work load 20kg (Lifting force: 196N)
 Conditions: Desired number of pads 5 pcs.
 Working vacuum pressure -60kPa
 Horizontal lifting

Selection procedure

From left condition
 Lifting force per pad: $196\text{N} \div 5 \text{ pcs.} = 39.2\text{N}$
 From Selection Graph ① as horizontal lifting
 Lifting force 39.2N
 Extend to the y-axis from the corresponding point of vacuum pressure -60kPa; result is to select a pad diameter bigger than 63mm.

Series ZPT/ZPX

Application Data

Theoretical Lifting Force

Theoretical lifting force for pad can be derived from calculations or taken directly from theoretical lifting force table.

Calculations

$$W = P \times S \times 0.1 \times \frac{1}{t}$$

W: Lifting force (N)

P : Stable vacuum pressure (kPa)

S : Pad area (cm²)

t : Factor of safety:

Horizontal pad contact: ≥ 4 (dynamic)

Vertical pad contact: ≥ 8 (dynamic)

Theoretical Lifting Force Table

Determine theoretical lifting force (excluding safety factor) from pad diameter size and working vacuum pressure. Divide the result by the appropriate safety factor to determine applicable lifting force.

Lifting force = Theoretical lifting force ÷ t

Table of Theoretical Lifting Force (Theoretical lifting force = $P \times S \times 0.1$)

N

Pad diameter (mm)		ø40	ø50	ø63	ø80	ø100	ø125

	–45	56.7	88.2	140.2	226.1	353.3	552
–40	50.4	78.4	124.6	201	314	490.7	

Precautions for Use

- ①The quantity and placement of pads should be considered when transferred work has a large surface area.

Install support brackets to prevent work from dropping according to your requirements.

- ② Vacuum response time and vacuum breaking time are influenced by internal volume of large bellows size pad, which has more volume than the large flat ribbed type pad. When response time is important, consider the following measures:

- Use a larger capacity ejector.
- Set a vacuum breaking valve.

How to Assemble/Disassemble

Remove bolts with a hex. key wrench from the pad underside. Tighten new pad with the bolts ensuring there is no gap between the adaptor plate and the pad.

How to Distinguish Different Pad Materials

Checking the mark on the pad's interior surface as shown in the figure on the left.

Material	Color	Mark
NBR	Black	—
Silicon rubber	White	—
Urethane rubber	Brown	—
Fluorine rubber	Black	F
EPR	Black	E

Large Size Bellows Style Vacuum Pad

Series **ZPT/ZPX**

Pad diameter: $\varnothing 40$, $\varnothing 50$, $\varnothing 63$, $\varnothing 80$, $\varnothing 100$, $\varnothing 125$

For loads with a curved surface
For heavyweight loads
For loads with large surface area

For transfer of CRT

For transfer of
cardboard box

For automotive production line

Large Size Bellows Style Vacuum Pad

Series ZPT/ZPX

Pad diameter: $\phi 40$, $\phi 50$, $\phi 63$, $\phi 80$, $\phi 100$, $\phi 125$
 Pad material: NBR, Silicone rubber, Urethane rubber, Fluorine rubber, EPR

Buffer stroke						
Pad dia.	$\phi 40$	$\phi 50$	$\phi 63$	$\phi 80$	$\phi 100$	$\phi 125$
25	●	●	●	●	●	●
50	●	●	●	●	●	●
75	●	●	●	●	●	●
100	—	—	—	—	●	●

Pad Materials and Characteristics

◎: Little or no influence ○: Can be used depending on conditions. X: Not suitable

Material	Item	Durometer HS ($\pm 5^\circ$)	Temperature range ($^\circ\text{C}$)	Oil resistance (gasoline)	Oil resistance (benzol)	Alkali resistance	Acid resistance	Weatherability	Ozone resistance	Abrasion resistance	Waterproof	Solvents (benzene, toluene)
NBR		50°	0 to 120	◎	X	○	○	X	X	◎	○	X
Silicone rubber		50°	-30 to 250	X	X	○	X	◎	◎	X	○	X
Urethane rubber		60°	0 to 60	◎	X	X	X	○	◎	◎	X	X
Fluorine rubber		60°	0 to 250	◎	◎	X	◎	◎	◎	○	◎	◎
EPR		50°	-20 to 150	X	X	◎	○	◎	◎	○	◎	X

The above table covers only general characteristics of subject rubber materials.

Pad material used SMC pass nominal JIS material standards; however, actual performance depends on operating conditions.

Interchangeable with flat pad with ribs for heavy loads

When changing to a different shape pad due to load change, the pad can be easily interchanged.

Possible combination — Same pad diameter, $\phi 40$ and $\phi 50$, $\phi 63$ and $\phi 80$, $\phi 100$ and $\phi 125$

Possible adsorption to cylindrical loads with easy fit to the load shape.

*Pushing force for adsorption is almost equivalent to return force of buffer spring.

Table 1: Diameter of cylindrical work which can be absorbed. (Reference value)

Model	Dia. of cylindrical work which can be absorbed: $\phi A^{(1)}$
ZP 40HB □	$\phi 80$ or more
50HB □	$\phi 100$ or more
63HB □	$\phi 120$ or more
80HB □	$\phi 160$ or more
100HB □	$\phi 180$ or more
125HB □	$\phi 230$ or more

Note 1) Consult SMC when requiring a diameter smaller than shown in table.

Note 2) Regard values mentioned above as reference only, since actual valves may depend on operating conditions.

Pad shape permits adsorption to sloped surfaces.

●When work shape or angles are transformed during adsorption or transportation.
(Example of a cardboard box)

●When adsorbed surface of work is sloped.
(Maximum angle: 5° *)

*Regard values mentioned above as reference only, since actual valves may depend on operating conditions.

How to Assemble/Disassemble

Remove bolts with a hex. key wrench from the pad underside. Tighten new pad with the bolts ensuring there is no gap between the adaptor plate and the pad.

How to Distinguish Different Pad Materials

Check for the indicator mark on the pad's interior surface as shown in the figure at left.

Material	Color	Mark
NBR	Black	—
Silicone rubber	White	—
Urethane rubber	Brown	—
Fluorine rubber	Black	(F)
EPR	Black	(E)
